andres8sanchez@gmail.com • (+34) 644 331 880 • [Linkedin](#) - [Portfolio](#)

Software developer with strong professional experience in game development and web technologies. Developed web-based applications using JavaScript, HTML, and CSS, including interactive controllers with API integration and real-time communication. Contributed to published titles featuring world-wide known brands such as Hot Wheels. Used to work with Scrum and Agile. Experienced, versatile, resourceful, and committed to continuous improvement.

EXPERIENCE

Petoons Studio | Barcelona, Spain

Oct 2023 - Nov 2025

Web development - Lead Porting Engineer - Gameplay Programmer

- **Shipped titles for Android and other platforms** featuring world wide known IP's such as PJ Masks, Hot Wheels or Monster High, worked with professionals from companies such as BMW in order to deliver results.
- Developed web-based controller for Hot Wheels cooperative multiplayer game using JavaScript, HTML, and CSS, enabling smartphone browser gameplay integration with in-vehicle display systems through API communication.
- Continuous adaptation to **new technologies** when the market or clients required it. Such as new DevKits for each console generation or third party technologies.
- Designed and coded solutions in Unity for each problem that arose, utilizing OOD and common design patterns for **maintainability and scalability**, adapting to **new technologies** when the client demanded it.

SHIPPED PROJECTS

Hot Wheels XTreme Overdrive | Unity for Android Automotive, Web Development

- Developed **web-based** AirConsole controller enabling smartphone-to-game connectivity where players' mobile browsers function as gamepads.
- Implemented controller using HTML, CSS, and JavaScript with WebSocket communication and JSON serialization for real-time state synchronization.
- Adapted and optimized the game for in-vehicle display systems for **BMW iX3**, addressing unique hardware constraints.

Football Guesser | HTML, CSS, JavaScript (Deployed on Vercel)

- Developed a football match prediction web app with vanilla JavaScript, featuring 10-round gameplay across six leagues.
- Implemented dynamic DOM manipulation, Fetch API for data loading, event-driven state management, and progressive scoring system without external frameworks.

Dracamar | Unity for PC (Shipped demo for PC)

- Created prototype scenes demonstrating **best practices** for Unity optimization systems to avoid development bottlenecks.
- Developed a tool to reduce the number of asset bundles loaded at once, decreasing loading times.

PJ Masks Power Heroes Might Alliance | Unity (Shipped to all platforms)

- Contributed to UI tasks, gameplay programming, and performance analysis.

KO-FI Engine | C++, SDL, Assimp, ImGUI

- Developed a video game engine **from scratch** as part of a 20-student team.

EDUCATION & TECHNICAL SKILLS

Universitat Politècnica de Catalunya - CITM | Barcelona, Spain

B.S. in Videogames Design & Development

Relevant Courses: Game Engines, Data Analysis, C++ Advanced Programming, Online networks applied to videogames

Languages: JavaScript, HTML, CSS, C#, C++.

Technologies: Unity, Git, Android Studio, Vercel, JSON APIs

Tools: Visual Studio Code, Git, Jira, Bitbucket, Chrome DevTools
